# ABOUT US

I am developing a management system designed to track the progress of a large group of individuals across specific tasks. The system boasts mass notification capabilities, user-friendly dashboards for both users and admins, and many admin functionalities. Administrators can easily view overall stats of their users, manage individual data, accept membership requests, and remove unwanted members. Additionally the system will support file uploads in the future, allowing admins to share materials with the group. This project is specifically meant to help facilitate the interaction between teachers and learners and to help teachers better track students progress
